Cron Jobs

Cron jobs allow you to automate certain commands or scripts on your site. You can set a command or script to run at a specific time every day, week, etc. For example, you could set a cron job to delete temporary files every week to free up disk space.

Warning: You need to have a good knowledge of Linux commands before you can use cron jobs effectively. Check your script with your hosting administrator before adding a cron job.

Cron Email

Send an email with the output every time the cron job runs. less »

You can have cron send an email every time it runs a command which produces output. If you do not want an email to be sent for an individual cron job, you can redirect the command's output to /dev/null. For example: `mycommand >/dev/null 2>&1`
